**DETAILED ACTION**

1. Claims 43-81 are rejected under 35 U.S.C. 103(a) as being unpatentable over Seger et al (WO9856981).

The claims are rejected for the reasons stated in the previous Office Action, Paper No. 9.

It is obvious that the endoglucanase enzyme in Seger et al functions in the same manner as the truncated endoglucanase or since it produces the same effect, i.e., increased tensile strength of the sheet or at the least it would have been obvious to employ the claimed enzyme in view of the fact that it is commercially available form of the endoglucanase. It is further noted that the use of the truncated enzyme is merely preferred, pages 8 and 9 of the specification and in the absence of any factual showing that the presently claimed enzyme performs in unexpected manner over the enzyme used in Seger et al, the claims are not patentable over Seger et al.

2. Newly added Claims were misnumbered as 95-135 since there were only 81 previous claims. The claims have now been renumbered as claims 82-122.

3. Applicant's arguments are premised on the use of the cellulose binding domain free endoglucanase, however, the arguments are not found persuasive for the reasons given above.
